

HIGH-PRINTING AND SECURITY FOR YOUR CARDS

AGILIA RETRANSFER ID CARD PRINTER FROM EVOLIS

Agilia's retransfer technology gives your cards a perfect aesthetic finish and offers you a wide range of graphic personalization options. This high quality is made possible by its ability to print beyond the edge (the design covers the entire surface of the card) and the 600 dpi resolution of its print head. The result is brilliantly colored cards, right down to the smallest detail. Any design is possible, single- or double-sided, depending on your needs. And for even more advanced nuance settings, Agilia offers colorimetric profile adjustment: so you get a rendering as close as possible to the colors seen on screen.

TOP QUALITY PRINTING ON ALL CARD TYPES

This is what Agilia retransfer technology offers. The retransfer film is the perfect fit for all cards and is highly adaptable to different materials and technical specifications, while covering the entire surface for an attractive finish. Add to that a print resolution of 600 dpi and color adjustment via color profile and you get an exceptional rendering.

OPTIMAL SECURITY FOR ALL YOUR CARDS

Agilia has numerous possibilities for graphic and electrical customization for greater card security. The choice is yours: microtext, guilloches, UV ink, high-definition QR code, etc. Need a higher level of security? Agilia is compatible with the lamination module for the application of laminates, such as varnishes and patches, transparent or with holograms.

AGILIA RETRANSFER ID CARD PRINTER FEATURES

EXCEPTIONAL QUALITY
